Adding pictures and movies to your pages

It is easy to use URL's to add pictures and movies to your pages. Here we show you how.

A page to start from

1. Download files (see right)
2. Using notepad++ open the file called 'media.html'.
3. Drag and drop the file into Chrome.
4. Look at it and the code. Notice:
   a. There is a comment in the html <!-- place img tag here→
   b. The comment doesn't show on the page.
   c. There are tags you haven't seen yet <header> <section> and <footer>
   d. The media.css file defines styles for these.
   e. What do these tags 'do' on the page?

Download these files to your coderdojo2016 directory:

From Examples - class 3

Media.html
and
Media.css

Save these files to your codedojo2016 directory. (right click on the link, 'save link as'. (make sure you save them to the correct directory).

Let's add a picture - **today is european coding day**

1. In notepad++ replace the comment '<!--place img tag here -->' with the <img> tag (see right).
2. Save the file and view it in chrome.
3. What does it look like?
4. Remove the 'width=500' attribute.
5. Save and view. What does it look like now?
6. Add the width attribute back and include 'height=100'.
7. Save and view. What does it look like now?
8. Try different values for width and height including leaving one or other out. See what the picture looks like.

```
<img width=500
src='https://upload.wikimedia.org/wikipedia/commons/thumb/7/74/EU_Flag_specification.svg/2000px-EU_Flag_specification.svg.png'>
```

Let's add a movie

1. In notepad++ replace the comment '<!--place iframe tag here -->' with the <iframe> tag (see right).
2. Save the file and view it in chrome.
3. What does it look like?
4. Go and find a you-tube video you like and add it's iframe to your page

```
<iframe width="560" height="315"
src="https://www.youtube.com/embed/Jo_-KoBiBG0"
frameborder="0" allowfullscreen></iframe>
```

Homework (optional)

Find 3 pictures and 2 videos from the WWW and add them to the web page.
